

# Devi Jagannadh Kalyan Muppala

Forward Deployed Engineer

Austin, TX | [kalyan.muppala7@gmail.com](mailto:kalyan.muppala7@gmail.com) | [LinkedIn](#) | [github.com/\[username\]](https://github.com/[username]) | [Portfolio](#)

## PROFESSIONAL SUMMARY

Forward Deployed Engineer with 3+ years of hands-on cloud infrastructure experience across AWS, Azure, and GCP. Currently at Levo.ai, working inside enterprise customer environments to deploy eBPF-based API security sensors on production Kubernetes, from the first technical call through scoping, rollout, and handoff. Equally at home on a call with customer engineers or writing the Python, SQL, or Terraform an engagement needs to get unstuck. Background in platform engineering and SRE at MilliporeSigma, where partnering with product teams cut provisioning time by 40% and unplanned downtime by 20%.

## PROFESSIONAL EXPERIENCE

### Levo.ai | AI Solutions Engineer (Forward Deployed)

Apr 2026 - Present

- Embed with customer security and platform teams during proof-of-value engagements, running technical discovery, scoping deployment prerequisites, and owning delivery through to a signed-off evaluation across [X] customer environments
- Deploy eBPF-based runtime API security sensors into customer production Kubernetes clusters (Amazon EKS, Azure AKS, Google GKE) using Helm, adhering to each customer's network policies, IAM/RBAC model, and change-control process, resulting in continuous API security monitoring
- Debug deployment blockers live with customer engineers, including network restrictions, IAM/RBAC misconfigurations, and sensor performance issues, and get environments back to a working state without pulling in core engineering
- Write Python and SQL tooling against customer API telemetry to produce risk and posture reports mapped to the OWASP API Top 10 and sensitive-data exposure, then walk customer teams through a prioritized remediation plan
- Built reproducible Kubernetes evaluation environments so every engagement starts from a known-good baseline, and set up health checks on deployed sensor fleets so failures surface before the customer notices
- Bring field issues back to product and engineering with repro steps, logs, and suggested fixes, and keep runbooks current so any engineer on the team can pick up an engagement mid-stream

### MilliporeSigma | Cloud Engineer

Jun 2024 - Apr 2026

- Designed and delivered proof-of-value pipelines using GitHub Actions and eBPF runtime sensors, allowing stakeholders to evaluate new cloud capabilities within two weeks
- Ran multi-region Amazon EKS clusters (upgrades, autoscaling, VPC CNI networking, IRSA) and tracked down the networking and container registry bottlenecks that had kept two product teams from meeting release SLAs
- Stood up a Prometheus and Grafana observability stack with SLIs, SLOs, alert thresholds, and incident runbooks agreed with each owning team, cutting unplanned downtime by 20% and bringing MTTR down
- Carried on-call and ran blameless post-incident reviews; root-cause findings went back into shared fixes that reduced repeat incidents across engineering

### Intellipaat | Cloud Infrastructure Engineer

Nov 2021 - Jan 2023

- Replaced manual provisioning with Terraform and Ansible across AWS and Azure for platforms serving thousands of concurrent users; monitoring, autoscaling, and automated failover cut downtime by 40%
- Built Jenkins and GitHub Actions pipelines covering build, test, and deploy, which shortened release cycles by 40% and removed the 2-day wait that manual handoffs used to add
- Containerized applications with Docker and Kubernetes and set up centralized logging with CloudWatch and the ELK stack, giving developers one place to look when something broke
- Handled Tier 2/3 production support, working incidents directly with affected teams and doing root-cause analysis across networking, compute, and container layers within SLA

## TECHNICAL SKILLS

- **Forward Deployed Engineering:** Technical discovery, proof-of-value delivery, customer production deployments, solution scoping-, remediation planning, stakeholder communication
- **Cloud Platforms:** AWS (EKS, EC2, S3, IAM, VPC, CloudWatch), Azure (AKS, Virtual Networks, Azure DevOps, RBAC), GCP (GKE)
- **Containers, Orchestration & IaC:** Kubernetes, Helm, Docker, Terraform, Ansible
- **CI/CD & Languages:** Jenkins, GitHub Actions, Azure DevOps, Git, Python, SQL, Bash
- **Observability & SRE:** Prometheus, Grafana, ELK Stack, CloudWatch, Azure Monitor, SLIs/SLOs, incident response
- **Security:** eBPF runtime sensors, API security, OWASP API Top 10, IAM/RBAC

## CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- Azure Administrator Associate (AZ-104)
- Azure Network Engineer Associate (AZ-700)

## EDUCATION

University of New Haven | **Master of Science, Business Analytics** (GPA: 4.0)

Lovely Professional University | **Bachelor of Science, Computer Science** (GPA: 3.40)
